

RISO Snapshot of Success

"We can now generate all of our color prints in-house, and they look great every single time!"

Tracy Emory, Secretary,
Berea First Baptist Church

Berea First Baptist Church

The Berea First Baptist Church had its first service on December 23rd, 1843, with a very small congregation that consisted of just twenty-three people. Over the years the church has grown significantly, and today the Greenville, South Carolina church has close to 2,500 members. The church also created a variety of ministries that allow members to get more involved in the church, while providing others with valuable resources. These

programs include the Music Ministry, Senior Adult Ministry, Summer Camps, GED Classes, Weekday Children's Ministries, and more.

With a large congregation and a large number of programs that support church members, Berea First Baptist Church regularly develops newsletters, flyers, brochures, and other mailings to keep members informed about latest news or upcoming events. Previously, some of these applications had to be outsourced to an outside print shop; the printing equipment that the church had in house was not able to print high-quality color documents and pictures. However, this all changed when Berea First Baptist Church was introduced to RISO's HC ComColor™ [high-speed inkjet printer](#).

Once the church purchased the HC, its print production process has changed considerably. "Now we use the HC to produce all

of our communication pieces, which means that it is used at least three to four times per week. During an average week we print about 1,500 copies on our HC," says Tracy Emory, Secretary at the Berea First Baptist Church. "Producing these materials got much easier and faster, as well as less expensive, because the church no longer has to outsource these print jobs," she adds.

The HC [high-speed printer's](#) versatile capabilities also played an important role in the church's decision to purchase this machine. "We can now generate all of our color prints in-house, and they look great every single time!" says Emory.
